# PACKTECH

SUPPLIER OF CHOICE FOR QUALITY BRANDS

## Company Profile

## Company Background

Pack Tech Moulding Limited (PTML) is 100% NZ owned and operated. Our extensive experience in design and innovation has made us a key player in the manufacturing of injection and blow moulding plastic packaging. Our purpose-built facility in Rolleston provides us with the ability to meet the strict hygiene standards required for the food, pharmaceutical and supplement markets as well as being able to deliver customised packaging solutions. We are committed to finding innovative and responsive ways to deliver improved outcomes for our customers through product development, warehousing, distribution and customer support.

## Our Commitment

Pack Tech's team is committed to providing their customers with packaging solutions to best meet their needs. Our technical knowledge supports our focus on innovation and customisation. While our own products are stock items, we also customise many of our products to suit customers needs. For instance, changing the threads/necks of any of our bottles or jars to suit a cap of their choice, moulding the product in a specific colour or customising a label shape etc.

Our own range of moulded products, includes pharmaceutical, industrial and food packaging and is available ex-stock. We also offer a strong contract moulding service for customised packaging which includes in mould labelling (IML). Pack Tech's production facility is a certified critical hygiene facility which enables us to produce both food grade and non-food grade products, we are also an approved food safe provider.

## Quality

PTML prides itself on having high quality standards. This extends from initial discussions about a new idea, through to the final production and commissioning of the product. Our quality systems are designed around the needs and expectations of our customers.

Pack Tech has adopted a process of continuous improvement for identifying opportunities for streamlining work, reducing waste, and improving outcomes for their customers.

Our food safety programme is modelled on the preventative food safety programme HACCP. This ensures that every step in the manufacturing process is analysed for hazards. All our food and pharmaceutical packaging are FDA and EU compliant and meet the following regulations:

- Food Act 1981 (+Amendment No2: 1996)
- Food Act 2014
- Food Regulations 2015
- Codex Alimentarius/Alinorm 97/13
- Food Grade Packaging Standards USDA Title 21 Parts 170 to 199

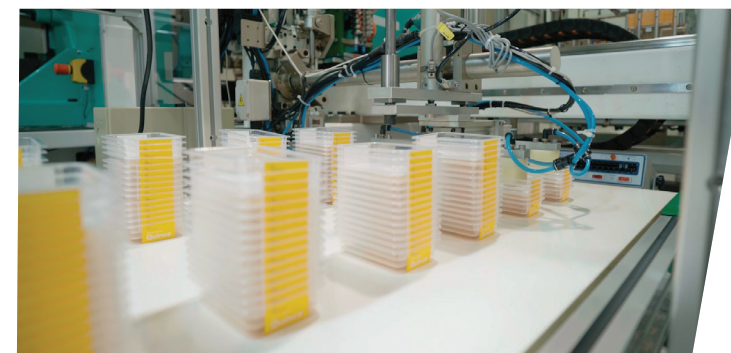

## Production

Production operates 24/6 but can operate up to 24/7 to meet changes in demand.

PTML specialises in injection and extrusion blow moulded packaging. Many of Pack Tech's injection and extrusion machines are equipped with automation that assist with the removal, stacking and packing of finished goods.

## Design/Toolmaking

PTML has an in-house toolroom equipped with the necessary equipment to manufacture and/or maintain moulds. The toolroom also offers support to our production team daily, helping action continuous improvement activities, along with assisting with any preventative or reactive maintenance.

Pack Tech works closely with other local mould makers as well as off shore partners to ensure we can offer our customers the best packaging solution. To assist with mould development and mould making, PTML has established good relationship with several partners, who now provide much of our mould requirements. The combination of our expertise in conjunction with our mould making partners enables us to be very competitive, but most importantly it means we meet the needs of our customers.

## Technical

PTML offers Technical Sales Support Services in:

Product design

- Product testing
- Material selection and testing
- Commissioning and assistance with packing line alterations to suit PTML supplied products
- Project management

## Sustainability/Environmental

As a responsible manufacturer, Pack Tech is committed to finding innovative ways to minimise waste, improve efficiencies and is passionate about developing ways to promote a circular economy. Pack Tech's site has a zero waste to land fill policy and actively pursues ways to include recycled content into our products where possible.
