This is HMS Networks!

Hardware Meets Software™

Hardware Meets Software. All the time. Everywhere.

HARDWARE: Industrial robots SOFTWARE: Industrial Ethernet network

HARDWARE: Packaging machine SOFTWARE: Remote programming tool

HARDWARE: Navigation equipment SOFTWARE: Steering system

HARDWARE: CNC Machine SOFTWARE: Functional safety

HARDWARE: Power Generator SOFTWARE: Remote management system

HARDWARE: Forklift (AGV) SOFTWARE: Wireless network

HARDWARE: Servo drives SOFTWARE: Real-time control network

HARDWARE: Air conditioning unit SOFTWARE: Building management svstem

Quick facts

Founded in	1988
Sector	Industrial ICT (Information and Communication Technology)
What we do	Products that enable industrial equipment to communicate and share information.
Operations in	17 countries
Employees	+750
Top 10 markets	Germany, North America, Japan, France, China, Sweden, Italy, UK, Benelux, Spain.
Head office	Halmstad, Sweden
Product brands	Anybus, Ewon, Intesis, Ixxat
Group members	WEBfactory, Procentec, Owasys
HMS stands for	Hardware Meets Software [™]
Vision	To become the World's greatest industrial ICT company.
Mission	We enable valuable data and insights from industrial equipment allowing our customers to increase productivity and sustainability.

Millions of industrial machines and devices use innovative HMS technology to communicate. Our solutions help them become more effective, productive and sustainable.

"

Staffan Dahlström President and CEO

A tale of innovation and growth

"There must be an easier way to connect industrial devices to any industrial network."

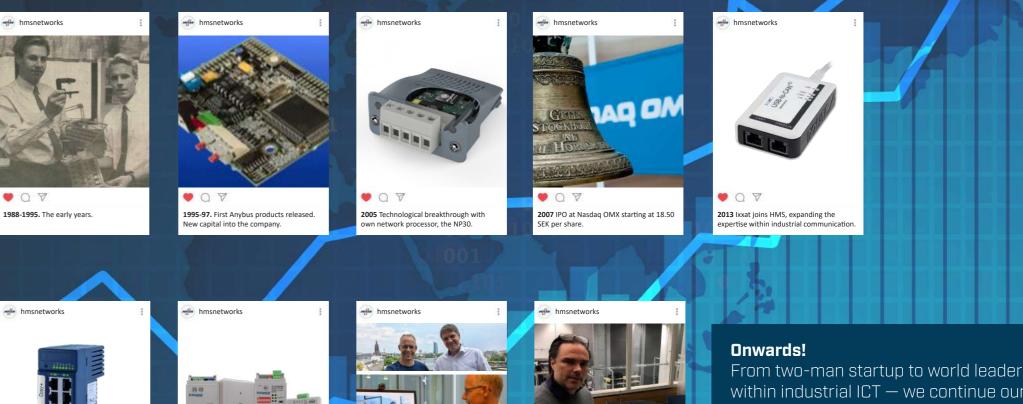

This is the innovative idea that propelled Nicolas Hassbjer's and Staffan Dahlström's start-up on a growth journey from a university project to world-leader in Industrial Information and Communication Technology.

Today, HMS employs 750 people in 17 countries and delivers communication technology to millions of industrial devices, machines and systems around the world.

Thirty years after the company's founding, our ambition still remains the same: we want to provide easyto-use, sustainable communication solutions which save users time and money.

For thousands of industrial companies all over the world, HMS is a trusted partner for industrial communication supporting from first product specification to full-scale production, while assisting with technical services during the product life cycle.

Some posts from HMS' growth journey

V 0 V

2016 Ewon joins and HMS becomes world leader in industrial remote solutions.

2016 Intesis joins and HMS ventures into ommunication for buildings

2018-21 Beck, WEBfactory, Procentec and Owasys join HMS.

0 7 2021 HMS presents world's first industrial 5G route

within industrial ICT — we continue our quest to become the World's Greatest Industrial ICT Company.

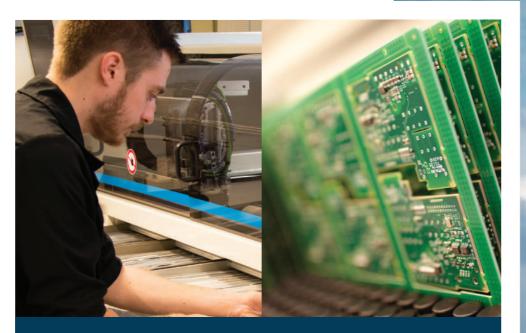

Quality, productivity and sustainability at heart

These things just have to work

HMS products handle business-critical data that keeps production lines, factories, telecommunications and industrial machinery running. This puts very high demands on quality and reliability.

Quality, productivity and sustainability has always been at the heart of HMS and everything we do, from selecting suppliers through product development, manufacturing and customer service.

According to our customer surveys, it is the high quality and the longevity that customers appreciate most about our solutions. This solid quality enables us to offer unique services such as free technical support and long product guarantees.

HMS Production

Main site: Additional production: Quality goal: Quality Management system: Deliveries: Product traceability: Halmstad, Sweden Subcontractors (EMS) in Europe and Asia 200 PPM (0.02% errors) According to ISO 9001:2015 100,000 products each month Down to PCB level

Our primary environmental goal: CO₂ Net Positive in 2025

"

The environment is one of the three focus areas in our 2025 strategy. As a company, we can offer a lot of sustainability gains for our customers as they can use our products to reduce service trips and optimize energy use.

But we can also do a lot in our own operations to reach our goal of becoming CO_2 net positive in 2025.

Kristina Altner Sustainability Manager

Our playing field — The Industrial ICT Arena

ICT stands for Information and Communication Technology and comprises three main areas: Control, Information and Infrastructure. It is within these areas HMS aim to expand in the future, both organically and through acquisitions.

Control

Primary HMS brands: Anybus, Intesis, Ixxat

Control refers to control-centric real-time communication between devices, machines and systems in industrial automation. This is a core market for HMS and most of our revenue comes from this area. Industry 4.0 is a strong driving trend.

Key Business Areas:

- Multi-network connectivity for automation products
- Network-to-network integration in factories
- Multi-network connectivity for HVAC equipment
- Connectivity for CAN & embedded control

Other key initiatives:

• Protocol conversion in buildings

Primary HMS brands:

Within information, data from industrial equipment and processes is provided securely to IT systems and operators for improved insight and decision-making. Data can be provided remotely as well as on premise. HMS is market-leading in remote access and data connectivity for machines.

Key Business Area:

• Remote access and data for PLC-based machines

Other key initiatives:

- Smart grid connectivity
- Monitoring of equipment

Primary HMS brand: Procentec

Communication Infrastructure refers to the infrastructural systems and networks used as foundation for industrial communication. With the Procentec brand, HMS is global leader within network diagnostics. In addition, HMS is an early adopter and thought leader in 5G solutions for Factory Automation.

Key Business Areas:

Network diagnostics in Factory Automation

Other key initiatives:

• 5G connectivity solutions

5G opens new doors

We see a lot of new opportunities within the Communication Infrastructure part of our playing field. Especially within 5G. With 5G in a factory, users benefit from a robust wireless network which meets industrial demands in terms of communication speeds and security – along with all the flexibility and mobility that comes with wireless.

HMS PRODUCTS

Connecting any device, machine and network

Millions of devices can't be wrong! As the clear market leading solution, Anybus® products make it possible to connect any industrial device to any industrial network or the Internet. Industrial networks are sometimes referred to as fieldbuses (hence Anybus) and come in different variants depending on market and industry. It's much like the multitude of languages used around the world. Anybus makes it possible for industrial equipment to communicate anywhere.

Bartek S. Candell General Manager Business Unit Anybus

OFFERING

Anybus Embedded Network cards which are embedded into the customer's product to provide network connectivity.

Anybus Gateways More than 300 stand-alone gateways for communication between all popular industrial networks.

Anybus Wireless Connects networks, machines and devices wirelessly over Bluetooth, WLAN or cellular networks.

Anybus Edge Connects industrial equipment to industrial data clouds and IoT systems.

Customer example:

Always connected, always sharp!

Hardware: Paper cutting machine Software: Industrial Ethernet network American machine builder JSI uses an Anybus gateway to connect their machines to a controlling network. This enables them to sell their machines to any region or industry, regardless of network. They also use Anybus Wireless solutions to get access to data from their machine via an iPad.

HMS PRODUCTS

Remote solutions for industrial applications

Ewon[®] provided IIoT solutions before the term IIoT even existed. With Ewon solutions, machines are accessible in a secure way over the Internet, giving users access to the machine and its data anytime and anywhere. Ewon has been voted the number one choice for Remote Access by the readers of Control Design Magazine – 6 years in a row!

Francis Vander Ghinst General Manager Business Unit Ewon

OFFERING

Ewon Cosv Provides machine builders with a secure tunnel for remote maintenance and troubleshooting.

Ewon Flexv Industrial routers and IIoT gateways for remote access and data services such as remote surveillance and information gathering.

Ewon Talk2M® A secure global, industrial cloud solution for remote access and data transmission to and from connected machines.

Ewon Netbiter An out-of-the box remote management solution, especially suitable for power generators and tank monitoring.

Customer example:

Online control of power generators in hospital

Hardware: Backup power generator Software: Remote management system In the plant room of the New Royal Adelaide Hospital in Australia, you will find six 21-ton power generators. With the help of Ewon's remote solutions, engineering firm RCR O'Donnell Griffin can commission and troubleshoot the generators remotely, making sure they are always ready to start if needed.

HMS PRODUCTS

Connecting buildings

Modern buildings include highly advanced networks with thousands of devices and machines that need to communicate. Intesis® offers communications solutions designed for buildings. Building automation is a rapidly growing market where HMS has identified excellent growth opportunities for the future.

David Garcés General Manager Business Unit Intesis

OFFERING

Intesis protocol translators Intesis offers gateways which act as translators between, for example, thermostats, lighting ballasts, smart meters, and building management systems running on KNX, BACnet or Modbus. The communication is configured with the software Intesis MAPS.

Intesis AC interfaces Intesis is known for the market leading ability to design specific AC interfaces for the major vendors of air conditioning equipment. Today, Intesis enables more than one million AC units from 100 different brands to communicate.

Intesis cloud solutions Intesis also offers solutions to monitor and control building equipment remotely via the cloud — using a web interface or a smartphone app.

Customer example:

HVAC integration in 280 rooms

Hardware: Air Conditioning Units Software: Building Management System Roomers, a 5-star luxury hotel in Munich with 280 rooms, uses Intesis AC interfaces for integrating Hitachi air conditioning units with a local room controller and a third-party premium design thermostat. The Intesis gateway allows the AC unit and the BMS system to communicate.

Making machines work on the inside

Ixxat[®] is a well-known brand in the automation market, especially for machine communication and security. Ixxat[®] stands for extensive expertise in CAN, a technology originating in the automotive industry but nowadays used in many fields. The Ixxat offering primarily consists of a large number of products that solve the most common types of communication problems in machines, including safety aspects. It also contains products that solve new communication challenges in smart grids.

Alexander Hess General Manager Business Unit Ixxat

OFFERING

Industry

Connectivity solutions for machines and development of hardware, software and associated services.

Energy Smart Grid Solutions for industrial. energy and railway power systems.

Safetv Solutions for easy implementation of safety communication into industrial equipment.

Automotive Test tools and hardware for use in test benches, during development, and for troubleshooting.

Customer example:

Giving electric vehicle batteries a second life

Hardware: Used electric vehicle batteries Software: Fieldbus and Smart Grid networks Connected Energy Ltd in the UK is building large energy storage systems made of used batteries from electric vehicles. Ixxat repeaters and gateways enable data communication between the battery modules to enable large arrays. Ixxat technology also enables connection of these systems to modern smart grid energy networks – enabling control, monitoring and predictive maintenance.

Wireless communication for mobile machines

OFFERING

Owasys offers wireless communication platforms to enable remote monitoring and control of a wide range of mobile machines. Products include owa4x - an IoT gateway that processes and sends data from industrial devices to the cloud, and owa450 which is an IoT platform for controlling and monitoring data from vehicles and industrial machines. Users benefit from reduced fleet downtime and predictive maintenance. Rember of the HMS group

Displaying machine information online

OFFERING

WEBfactory offers software for displaying information from industrial equipment in easy-to-use web interfaces. The i4 software is a perfect add-on for many other HMS products which handle data on the factory floor. These can be connected to WEBfactory solutions making machine data available online. Users benefit from instant visualisation and control of processes, but also analysis and prediction of events.

PROCENTEC® Member of the HMS group.

Keeping industrial networks running

OFFERING

Procentec products change the way diagnostics and monitoring are done in factory networks. The products include both hardware and software which measure, signalize and connect the different parts of an installation and ensure that it operates effectively. Key products such as ComBricks, Atlas and Osiris make the engineer's life easier, increasing the factory's output by minimizing costly downtime. Their solutions are industry sector and supplier independent, making them applicable in almost all set ups.

Always at the forefront of technology

HMS has always been at the forefront of technology.

5G Connectivity

Safer, flexible and more efficient manufacturing systems will be possible thanks to the ultra low-latency and reliability of 5G connectivity.

Connecting industrial hardware and software (e.g. IoT systems) is exactly what HMS stands for. Hardware meets software when cloud and Edge solutions get machines connected.

Cloud and Edge solutions

Cloud and Edge solutions are both used to realize Industrial IoT. Edge solutions cater for more industrial, time-critical demands thanks to decentralized data processing.

Functional Safety

Products and services for a faster and easier safety implementation – either using communication modules or with highly flexible protocol stacks.

Industrial Internet of Things

Smart Grid

The energy grid of the future will require devices and systems to communicate for efficiency and sustainability purposes. HMS makes it happen.

Wireless solutions

Wireless technology such as Bluetooth and WiFi/WLAN are increasingly used also in demanding industrial applications. HMS leads the way.

Artificial Intelligence

Artificial Intelligence will help industrial automation become more effective. Information from machines is key. This is where HMS can help.

Industrial security

Protect your data and your industrial systems with HMS' advanced security features and discover best practices for securing your IoT systems

Industrial Ethernet networks

Enable any industrial device to communicate with any Industrial Ethernet, fieldbus network or industry cloud, wired, or wirelessly.

Network Diagnostics

Procentec is a stand-alone brand of HMS, offering network diagnostics solutions for industrial networks that minimize costly downtime in factories.

TSN — Time Sensitive Networking

TSN is a new set of standards specifying real-time Ethernet-based communication.

TechTalks from HMS Networks

On the HMS website, you can stay up to date on the latest trends in the world of automation and IoT. Learn from HMS' experts in the TechTalks webinar series.

Close to you. Wherever you are.

With offices in 17 countries and distributors in another 50, we stay close to our customers in the major industrial markets.

HMS' five Market Units handle sales, support and other customer service activities on the local markets. There are also four Business Units, developing the actual products to be sold. The combination of Business Units and Market Units gives HMS an international perspective, with local presence.

MARKET UNIT NORTHERN EUROPE AND REST OF WORLD Halmstad (Sweden), Coventry

(UK), Hedel (Netherlands) and Dubai (UAE).

HEART, MIND AND SOUL IN WHAT WE DO

Although HMS is a truly international company, we like to think that we share a common culture. Heart, Mind and Soul is a summary of how we do things (makes for a pretty good abbreviation too). Heart means collaborating, engaging and taking responsibility for what we do. Mind means building for the future, focusing on sustainable growth and creating win-win situations for us and our partners.

By Soul, we mean to dare, drive and inspire when it comes to our working life.
